

Shared Measures implementation | 2022

Starting Jan 2022, all new Shared Care projects are required to integrate Shared Measures into their evaluation strategy.

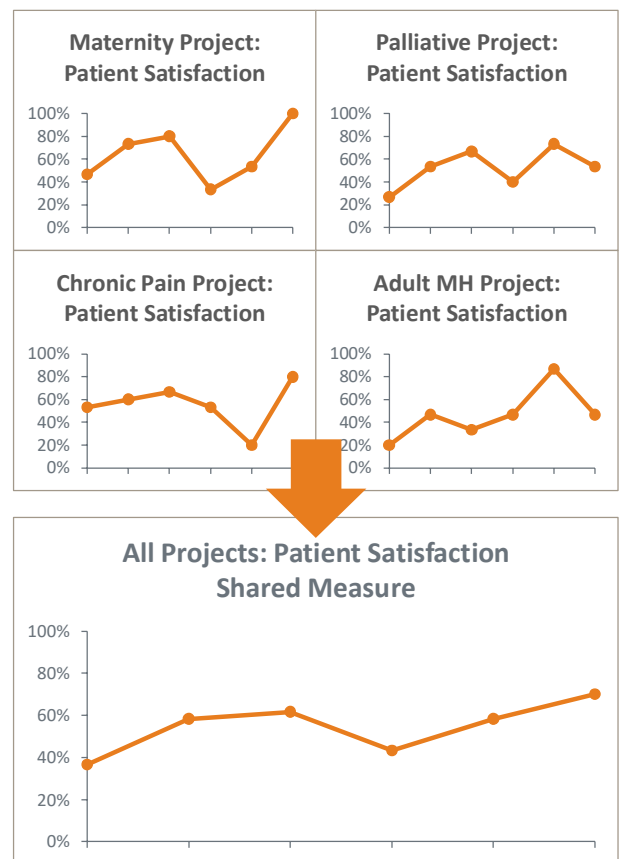

WHAT ARE SHARED MEASURES AND WHY ARE THEY IMPORTANT?

Shared Measurement is an approach that allows different organizations and projects to consistently gather, analyze, and report data in a common way.

Shared Care is implementing this approach to ensure we are working towards our goal to meet the Triple Aim and achieve project outcomes which demonstrate our collective impact on providers, patients, their families, and the health care system.

HOW WILL SHARED MEASUREMENT BE INTRODUCED?

Project teams will identify between 4–7 Shared Measures to collect based on the goals and objectives of their project. There are 31 measures projects can choose from. Many of these measures can be collected at the end of the project through surveys. It is up to project teams to engage any stakeholders in the selection process.

Shared Measures by itself is not a replacement for the project’s evaluation strategy. It is one component of the overall evaluation.

OVERVIEWS

RESOURCES & SUPPORT

The Shared Care team is available to help you incorporate Shared Measures into your projects. We will provide support through:

- Regular check-ins (orientation sessions, project lead calls, webinars) to work through the measurement planning process
- Sharing of resources (Reference Manual, list of Shared Measures, and Evaluation Plan template)
- Coaching from the Shared Care team, including your SCC Liaison and SCC Evaluation team

We look forward to working with you to implement Shared Measures for your project. Please connect with your [SCC Liaison](#) if you need further information.

For surveys, and other evaluation tools and resources visit the [Shared Care Learning Centre](#).

“The goal is to turn data into information, and information into insight.” — Carly Fiorina
